

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A window switching apparatus comprising:

an input unit;

a display unit;

a title list display processing unit for displaying titles of windows currently set on said display unit, as a title list in a region other than a region where a taskbar is displayed on said display unit;

an activation processing unit for making a window corresponding to a title emphatically displayed among said titles included in said title list active;

said title list display processing unit comprising:

a select-and-display processing unit for selecting titles of a predetermined number of windows and displaying said selected titles in title display areas of a predetermined size constituting said title list when the current number of windows is larger than the predetermined number; and

a change-and-display processing unit for changing the titles displayed as said title list and displaying said titles when a title display change command is inputted through said input unit, wherein said change-and-display processing unit scrolls through titles displayed as said title list to change said titles displayed,

wherein said activation processing unit ~~makes~~ switches a window to be activated by making

Amendment filed November 16, 2009
Reply to OA dated August 4, 2009

a window active, which corresponds ~~corresponding~~ to a title emphatically displayed ~~among titles included in said title list active~~ when a predetermined time after another window was made active last time has elapsed, not making a window active, which corresponds to a title emphatically displayed to be switched in succession while the titles displayed as said title list are scrolled ~~so that the activated window is kept as it is until said predetermined time has elapsed while the title emphatically displayed in said title list is switched from one to another in succession,~~ wherein said predetermined time is selected by a user of the apparatus.

Claims 2-3 (Canceled)

Claim 4 (Original): The window switching apparatus according claim 1, wherein said input unit comprises a mouse; and

said title list display processing unit displays said title list in the neighborhood of a mouse cursor moving in association with movement of said mouse.

Claims 5-6 (Canceled)

Claim 7 (Previously Presented): The window switching apparatus according to claim 1, wherein said title list display processing unit displays a drum-like title list having a size according to the current number of windows as said title list on said display unit.

Claims 8-9 (Canceled)

Claim 10 (Previously Presented): The window switching apparatus according to claim 4, wherein said title list display processing unit displays a drum-like title list having a size according to the current number of windows as said title list on said display unit.

Claim 11 (Currently Amended): A computer readable record medium containing a window switching program for making a computer execute a process comprising a title list displaying process of displaying titles of windows currently set on a display unit of said computer, as a title list in a region other than a region where a taskbar is displayed on said display unit, and an activating process of making a window corresponding to a title emphatically displayed among titles included in said title list active;

said title list displaying process comprising:

a selecting-and-displaying process step of selecting titles of a predetermined number of windows and displaying said selected titles in title display areas of a predetermined size constituting said title list when the current number of windows is larger than the predetermined number; and

a changing-and-displaying process step of changing the titles displayed as said title list and displaying said titles when a title display change command is inputted through an input unit;

wherein, at said changing-and-displaying process step, said window switching program makes said computer execute a process of scrolling through titles displayed as said title list to change

U.S. Patent Application Serial No. **10/634,843**

said titles displayed, and

wherein, in said activating process, said window switching program makes said computer execute an activating process of ~~making~~ switching a window to be activated by making a window active, which corresponds ~~corresponding~~ to a title emphatically displayed ~~among titles included in said title list active~~ when a predetermined time after another window was made active last time has elapsed, not making a window active, which corresponds to a title emphatically displayed to be switched in succession while the titles displayed as said title list are scrolled so that the activated window is kept as it is until said predetermined time has elapsed ~~while the title emphatically displayed in said title list is switched from one to another in succession~~, wherein said predetermined time is selected by a user of the apparatus.

Claims 12-13 (Canceled)

Claim 14 (Original): The computer readable record medium containing a window switching program according to claim 11, wherein said input unit comprises a mouse; and

in said title list displaying process, said window switching program makes said computer execute a process of displaying said title list in the neighborhood of a mouse cursor moving in association with movement of said mouse.

Claims 15-16 (Canceled)

U.S. Patent Application Serial No. **10/634,843**
Amendment filed November 16, 2009
Reply to OA dated August 4, 2009

Claim 17 (Previously Presented): The computer readable record medium containing a window switching program according to claim 11, wherein, in said title list displaying process, said window switching program makes said computer execute a process of displaying a drum-like title list having a size according to the current number of windows as said title list on a display unit.

Claims 18-19 (Canceled)

Claim 20 (Previously Presented): The computer readable record medium containing a window switching program according to claim 14, wherein, in said title list displaying process, said window switching program makes said computer execute a process of displaying a drum-like title list having a size according to the current number of windows as said title list on a display unit.

Claims 21-26 (Canceled)
